

Learn how Doctor Dutta never misses a patient's call without sharing his mobile number. Jio's IP Centrex makes this possible for him

Meet Dr. Dutta who runs a fairly successful practice in Mumbai. He is a general practitioner and has been a family doctor to many in the vicinity. Over the years, many patients have been added to his growing practice, just by word of mouth.

A lot of new patients contact him on his personal mobile directly, something that he wants to address without losing the connect.

His mobile being the only channel to communicate with his staff as well as patients is getting pretty cumbersome to manage for him.

With the growth of his practice, Dr. Dutta feels the need to have his staff handle operations, appointments and basic patient queries in a more professional and effective manner.

A friend advises him to go for Jio's IP Centrex solution!

This solution comes with unlimited domestic calling facility apart from a host of features suited for a mid to large size set-up.

Dr. Dutta didn't expect so many benefits! He has freed up so much time and has been able to squeeze in more consultation hours! Few things that he is able to do now are-

Maintain privacy. Publish only clinic number and yet receive calls on mobile when he chooses to

Communicate with assistant on intercom (CUG calling) instead of bell or mobile

Never miss a single call with the simultaneous ringing feature

Make unlimited voice calls in India with no additional charges

Scale up quickly when expanding practice

So, just like Dr. Dutta, you too can use **Jio IP Centrex** to easily stay in touch with your customers, employees and partners, anywhere, anytime and give your business the edge it deserves.
