

RELIANCE JIO INFOCOMM LIMITED

CLIMATE CHANGE POLICY

Climate Change Policy

Reliance Jio Infocomm Limited (RJIL) acknowledges that climate crisis is an existential threat for life on Planet Earth. We are fully committed to the fight against Climate Change and acknowledge that urgent climate action is imperative. RJIL has set SBTi verified short term emission reduction targets as well as long-term target of becoming Net Zero.

We aim to deliver on our climate commitments by:

- Setting and reviewing science-based emission reduction targets for aligning with the goals of the 2015 Paris agreement to limit global warming by 1.5°C.
- Integrating climate-related physical and transitional risks and opportunities in our strategic planning and continuously monitoring adequacy of plans and resources.
- Reducing GHG emissions from our own operations by transitioning to renewable energy to power our network, striving to achieve best in class efficiency through innovation and technology adoption and promoting circular economy initiatives in our operations.
- Neutralizing residual emissions, if any, through nature-based solutions for sequestering carbon.
- Embedding carbon-considerations in our major procurement decisions; engaging with our carbon-intensive suppliers and encouraging them to adopt climate-friendly practices for the production of goods and services, distribution & logistics.
- Exploring opportunities to develop innovative and cost-effective digital products and services that enable our clients to decarbonize.
- Monitoring our emissions, building credibility through third party verification and reporting our performance following leading international standards.
- Supporting our employees, our suppliers and the wider community in adopting climate-friendly practices through awareness initiatives.
- Collaborating and forming partnerships with stakeholders and using industry forums to propagate climate-friendly policies.
